

Demographic Information

Call Name	Sonny	DOB	Jan 20
Registered Name	Hughes Toy Blue Persuasion	Registration Number	ASDT-
Breed	Miniature Australian Shepherd	Tattoo	
Sex	M	Microchip	9900C
Owner	Ashley Edens	Laboratory #	AN-L-(
		Report Date	August

These tests were developed and performed by Paw Print Genetics®, Spokane WA.

Explanation of Results

Normal | A 'Normal' result means that your dog does not have the mutation that causes the associated genetic disease.

Carrier | A 'Carrier' result indicates that your dog has inherited one copy of the mutation that has been reported to cause this genetic clinically affected by this mutation because two copies of the mutation are usually required to cause disease.

Carrier / At-Risk | A 'Carrier / At-Risk' result indicates that your dog inherited one copy of the mutation that has been reported to cause this genetic inheritance for this particular disease, inheriting one mutant copy of the gene may result in the disease. Dogs with a milder phenotype as compared to dogs with two copies of this mutation.

At-Risk / Affected | An 'At-Risk / Affected' result indicates that your dog inherited one or two copies of the mutation that has been reported to cause the mode of genetic inheritance for this particular disease, inheriting one or two mutant copies of the gene may result in the disease.

No Result | 'No Result' indicates that we were unable to obtain a genotype for your dog for this specific disease or trait and does not mean your dog is at risk for this disease. There are a variety of reasons why a specific test may not provide a reportable result. Unique variations in individuals may exist and cause certain regions of the genome to not perform properly with a specific test. In addition, suboptimal sample quality could also result in poor sample performance due to inadequate cell counts, bacterial and fungal growth, or the presence of an unacceptable level of tests with no results has been determined by Paw Print Genetics. Dogs with at least 90% of the test results are reportable. If your dog has an unacceptable level of tests with no results, you will be contacted for a new sample to retest.

Please review our [testing terms and disclaimers](#) regarding your results.

WT: **wild type (normal)**

Breed Profile

Disease Name	Genotype	Interp
Collie Eye Anomaly	WT/M	Carrier
Cone Degeneration	WT/WT	Normal (
Degenerative Myelopathy Common Variant	WT/WT	Normal (
Exercise-Induced Collapse	WT/WT	Normal (
Hereditary Cataracts Australian Shepherd Type	WT/WT	Normal (
Hyperuricosuria	WT/WT	Normal (
Intestinal Cobalamin Malabsorption Border Collie Type	WT/WT	Normal (
Multidrug Resistance 1	WT/WT	Normal (
Multifocal Retinopathy 1	WT/WT	Normal (
Neuronal Ceroid Lipofuscinosis 6	WT/WT	Normal (
Neuronal Ceroid Lipofuscinosis 8 Australian Shepherd Type	WT/WT	Normal (
Progressive Retinal Atrophy, Progressive Rod-Cone Degeneration prcd	WT/M	Carrier
Von Willebrand Disease 1	WT/WT	Normal (

WT: **wild type (normal)**

Coat Colors & Traits

Trait Name	Genotype	Interp
A Locus Agouti - A ^y , a ^t , a	a ^t /a ^t	Tricolo
B Locus - b^c, b^d, b^s Brown	B/b or b/b	Carries or black
B Locus (Brown) - b ^c B Locus (Brown) - b ^d B Locus (Brown) - b ^s	1 1 0	
Cu Locus Curly Hair	Cu/Cu ^C	Curly/v
D Locus - d¹ Dilute	D/D	Non dilute
E Locus Yellow/Red	E/E	Black
E^m Locus Melanistic Mask	E ^m /N	Melanistic
K Locus Dominant Black	k ^y /k ^y	Agouti
L Locus - Lh¹ Long Hair/Fluffy	Lh/Lh	Long Hair
Sex Determination	X/Y	Male
T Locus Natural Bobtail	t/T	Bobtail

WT: **wild type (normal)**

Determinants of coat colors and traits are complex. Many of these variants are known and many of the genes screened in the Canine HealthCheck interact. Not all that contribute to a dog's coat color and traits are known. Because of the complexities in gene-gene interactions, the coat colors and traits reported in your Canine HealthCheck are based on your dog's actual appearance. Individual differences in genes throughout the canine genome, not tested in this genetic screen, may also affect the final appearance.

Diseases

DISEASES

Disease Name	Genotype	Interp
Alaskan Husky Encephalopathy	WT/WT	Norma
Alaskan Malamute Polyneuropathy	WT/WT	Norma
Amelogenesis Imperfecta	WT/WT	Norma
Benign Familial Juvenile Epilepsy	WT/WT	Norma
